

STRAUMANN® PRO ARCH

teethtoday™

“This will help me fulfill  
my dreams.”  
- Ryan

Your new  
smile starts  
*here.*

# So what exactly is a “prosthesis?”

It’s something man made that replaces a natural part of your body. In the case of Straumann® Pro Arch, it’s a set of multiple artificial teeth that take the place of missing or damaged natural teeth.

## **Straumann® Pro Arch. For a smile that lasts.**

If you’re going to have a tooth replaced, the best you can do is replace it with something that mimics a natural tooth as closely as possible. Only dental implants replace the entire tooth structure, including the root and crown. As a result, dental implants look and feel like natural teeth, and help prevent and minimize bone loss while preserving surrounding teeth.

**DID YOU KNOW?** Straumann is the #1 implant manufacturer worldwide, and every one second someone is treated with a Straumann product.\*

\*Straumann Annual Report 2017

# Advantages of Straumann® Pro Arch

Helps you maintain a healthy and youthful appearance and smile

Restores and preserves your natural facial structure

Provides a reliable long-term dental solution

Makes it possible for you to eat what you want, when you want

Improves your overall quality of life

Before

After

**Straumann® Pro Arch implant-supported dentures are removable by your dentist for maintenance.**

Your natural-looking teeth are fixed to dental implants with tiny screws and are secure as your natural teeth. This is a permanent solution, but your dentist can remove them periodically for cleaning and maintenance.

**teethtoday™**

## Here's a quick look at the process.

- 1 Exam and Planning**

Your dentist provides a thorough exam and talks over the treatment options that best fit your condition and needs.
- 2 Surgery and Temporary Placement**

Implants are placed and an impression is taken to plan for your permanent prosthesis. A temporary arch may also be placed.
- 3 Final Impression**

After healing, an impression is made for your final prosthesis. When complete, the prosthesis will be secured to the implants in your mouth.
- 4 Restoring Your Smile**

Your final prosthesis is secured to your implants and the fit and feel are adjusted as needed.

## How to Take Care of Your New Smile

- Your dentist will remove it for maintenance, but you should not do it yourself.
- Between regular check-ups, you should brush and care for your prosthesis just as you would with your natural teeth
- Your dentist will also provide detailed instructions for care

## Straumann by the Numbers

- More than 20 million implants sold worldwide\*\*
- More than 60 years of experience
- More than 35 years of clinical documentation on implant performance

**When it comes to dental implants, we know that you've got high expectations. Any implant solution should be comfortable and durable, and attractive and natural-looking. It should function like normal teeth, and contribute to your quality of life.** Our Straumann® Pro Arch system can do all that. It's a smart solution that can make the process of restoring your smile efficient and seamless.

## **EXCEEDING YOUR EXPECTATIONS**

The Straumann® Pro Arch system combines dental implants and a supporting prosthesis (or "arch") to replace multiple teeth at once. Straumann quality implant technology combined with a sleek and natural-looking prosthesis creates a long-term solution. Best of all, you'll be able to eat, talk and smile again quickly!

---

If you have inadequate bone volume and /or quality, local root remnants, serious internal medical problems, uncontrolled bleeding disorders, inadequate wound healing capacity, not completed maxillary and mandibular growth, poor general state of health, drug or alcohol abuse, psychoses, pro-longed therapy-resistant functional disorders, xerostomia, weakened immune system, illnesses requiring periodic use of steroids, uncontrollable endocrine disorders, bruxism and other parafunctional habits, these conditions might present a risk for you. Consult your clinician to find out if dental implants are right for you. The possibility of a minimally invasive procedure and receiving your new teeth on the day of surgery depends on many factors, such as bone presence and quality, dental history, implant location, and implant stability. Your clinician will fully describe the possible scenarios to you during consultation prior to surgery.
